

## Programming without Code – Really !

**Ross Cruickshank**  
Developer Advocate  
IBM Z Influencer Ecosystem

**Monday, 14<sup>th</sup> March 2022**  
**7.00 – 8.30pm**  
**Online**

*(Registration starts at 6:45pm)*

Register online at: <https://bed140322.eventbrite.co.uk>

Many people fear computer programming. The excitement of writing lines of code to create 'Hello World' is not universal. Low-Code and No-Code programming have emerged as viable approach to create computer programmes with little, or even no, lines of codes. The programmes are created by manipulating programme constructs with a Graphical User Interface.

In this session, we'll take a tour of one of the most versatile Low-Code tools available that completely embraces the idea of Flow-based programming. Node-RED is a visual program layout and connection environment, designed to maximise the use of existing (community-developed) code across a very broad range of application areas and platforms – from Raspberry PI to mainframe, mobile phones to cloud services.

**Ross Cruickshank** is an IBM Z Developer Advocate working with developers, students, and enterprises to help develop skills, and introduce modern development and operations tools and practices across Cloud and IBM Z systems. Currently using flow-based tools for building educational and operational systems between IBM Z and third party SaaS offerings.

### Agenda

6.45pm	Sign in – Welcome – Networking
7.00pm	Low Code Programming – Ross Cruickshank
7:45pm	Q & A and Networking
8.30pm	CLOSE
